

# WARD STREET CORRIDOR IMPROVEMENT STUDY

## STUDY GOALS

The overall goal of the corridor improvement program is to develop a plan that will provide additional capacity in the Ward Street corridor for both auto and non-auto travel. This program, with its improvements, will build towards a long term road network for Bridgenorth community.

The study Goals are as follows:

- Develop a plan for the reconstruction of the Ward Street corridor to provide sufficient capacity to accommodate through and local traffic until such time as the Bridgenorth bypass comes on-line.
- Provide improved connectivity within the established community through improved access to the Ward Street corridor during peak periods of travel demand.
- Ensure that improvements to Ward Street will develop/maintain access options for new commercial and residential development along to the corridor.
- Provide/improve access along and across the Ward Street corridor to support pedestrian and non-auto travel.
